

Sustainable Value Plan 2030

Reduce our own environmental impacts and contribute to the resolution of environmental issues.

# Environment

## Social Issues

Since the Industrial Revolution, we have experienced large improvements in our lives, but at the same time, this has caused a range of environmental issues. Continuing rises in sea levels and extreme weather resulting from climate change, depletion of our land resources, destruction of our forests, water pollution and depletion of water resources and changes in our ecosystems are taking place on a global scale. The Paris Agreement calls for action by all countries to reduce greenhouse gas emissions. The international society must take action to resolve both the issues resulting from our economic activities and environmental issues to guarantee sustainable development into the future.

## Fujifilm Group's Goals under SVP 2030

(Priority Issues)

1. Address climate change.
2. Promote recycling of resources.
3. Address energy issues toward a non-carbon society.
4. Ensure product and chemical safety.

To achieve sustainable development, the whole of the Fujifilm Group around the world is working on various environmental issues under its Green Policy so that it can also be the leading company in the environmental field. In addition to reducing the environmental impact of our production activities, we are focusing on cutting CO2 emissions and making effective use of water and other resources across the entire product lifecycle, reaching as far as the use and disposal of our products by our customers. We are also developing products and services that offer outstanding energy-saving and resource saving results that will contribute to reducing the environmental impact for society as a whole. In R&D we are developing new technologies to resolve environmental issues including energy issues.

## The Key Points in FY2018 Activities

### OUTPUT

### OUTCOME

Established a renewable energy usage target.

Promoted renewable energy usage.

Started the new certification system for environmentally conscious products.

Contributed to CO2 emissions reduction in society.

Developed an alternative animal testing method.

Promoted the 3R principles\* in animal testing.

\* 3R principles in animal testing: Replacement, Reduction, and Refinement.
