

Cleaning, Disinfection and Sterilization for Ultrasound Probes and Accessories

This list shows the disinfectants that can be used in Ultrasound probes and accessories. The explanation of C, N and Blank in the list is as follows.

Explanation in the list is as follows.

Item	Definition
C	Compatible
C*1	Use with STERRAD® Booster (Part #15400) and STERRAD® Adapter II (Part #15402).
C*2	Please refer to the instruction manual of the medical device for specific sterilization parameters.
C*3	Some probe housing and its accessories will be yellowed, the surface of some plastic materials become rough and the cable sheath becomes hard and tacky by Antigermix disinfectant using UVC. FUJIFILM Healthcare Corporation. and Germitec confirmed that the function of the probe and its accessories do not suffer damages.
C*4	Optional waterproof case for probe connector is mandatory.
C*5	The probe can only be cleaned/disinfected manually with this cleaner/disinfectant.
C*6	Trophon Curved Probe Positioner (CPP) is required.
C*7	Can be used for pre-cleaning or pre-disinfection.
C*8	Wipe gently with gauze impregnated with ethanol for disinfection (76.9-81.4 vol%). In addition, ethanol cannot be used by immersion.
C*9	Wipe gently with gauze impregnated with isopropyl alcohol for disinfection (50-70vol%). In addition, isopropyl alcohol cannot be used by immersion.
C*10	It is applicable with only insertion portion. Do not use it to proximal head.
C*11	It is applicable with only proximal head. Do not use it to insertion portion.
C*12	The ultrasonic radiation part may turn red, but there is no problem with image quality and safety.
N	No (do not use)
Blank	Not tested (do not use)

⚠ CAUTION

To choose an appropriate disinfectant, users must determine the required level of disinfection, based on the classification (See Table 1.) and the regulation of each country.

If the probe is cleaned and disinfected by the washer disinfectant system, certainly connect the waterproof case to the probe connector. The probe which cannot be connected to the waterproof case, cannot be applied to the washer disinfectant system.

Table 1 Levels of Disinfection Requirements

Classification	Definition	Levels of disinfection
Critical	Device directly contacts tissue or blood (Intraoperative or biopsy applications)	Sterilization
Semi-critical	Device contacts mucous membranes (Intracavity applications)	High
Non-critical	Device contacts intact skin	Intermediate or low

The product names, etc. described in this material are registered trademarks or trademarks of their respective companies.
