### **RAW COLOR CHANGE FUJI CRYSTAL ARCHIVE PROFESSIONAL DEEP MATTE VELVET PAPER H**

---

The Fuji Crystal Archive Professional Deep Matte Velvet paper type H has been modified. The raw paper color has been changed.

Raw paper color before and after the change.

*First production CLP-lot with changed product is:*

Material	Velvet H
Lot number	715

#### **The consequences of this change are:**

Change of the exposure sensitivity balance.

This means that a paper balance calibration is required when the paper is loaded into the printer for the first time. The first calibration print will deviate color from a regular emulsion change and may need several test print iterations before it will be balanced. After the paper calibration the print quality will be equal to the previously used paper.

The currently used printer LUT's will not change.

No change in printer settings (Dmax, ICC profiles, etc.).

No significant differences in physical and photographic properties.

No changes in paper names.

#### **Introduction planning**

This modified paper is being produced from October 2016 onwards. Introduction to the market will be done based on stock turnover.

If you have any questions about this issue, please do not hesitate to contact us.
