Seritone Matching System

PANTONE® Shades Simulated From Seritone Base Colors

This booklet furnishes the necessary formulas to simulate all the colors in the PANTONE® Color Formula Guide

Each formula was printed through a 380.31.PW monofilament screen with an 80 durometer sharp edge squeegee, without thinning, on Compact Disc (without white base). The formulas were viewed in cool white fluorescent lighting (CWF). All formulas are presented by weight. However, due to variations in ink film thickness, screen mesh, and other variables, some formulas may need adjustments.

The Seritone Matching System (SMS) has been designed to enable screen printers to simulate almost any shade from nine SMS base colors, three metallic pastes plus Shading Black, Tinting White, Mixing Clear and Metallic Mixing Clear.

The SMS Base Colors have been carefully selected for their cleanliness of tone, resistance to fading, and suitability for intermixing. In addition, each ink has been formulated to be CPSIA compliant.

Although every care is taken in producing these formulations, variations in disc color and printing conditions will affect color achieved. Fujifilm assumes no responsibility for actual color achieved. For this reason, all formulations must be proofed, prior to production run, to ensure color accuracy.

The DVD Colors are listed below and are available in single gallon containers:

Fujifilm's color mixing ink formulations for screen process printing produce only simulations of PANTONE Colors in this color reproduction method due to differences in ink film, opacity and pigment selection. The pigment selection used in blending screen process inks may cause metamerism. Pantone, Inc. assumes no responsibility for formula accuracy. PANTONE® is Pantone, Inc.'s checkstandard trademark for color.
