FUJICOLOR CRYSTAL ARCHIVE PROFESSIONAL PAPER SUPER TYPE PD

Improved Color Reproduction

Excellent Image Stability

Accurate Whites

Improved Lab Handling Characteristics

THE PERFECT CHOICE FOR DIGITAL PRINTING OF PORTRAIT AND WEDDING PHOTOS.

Fujicolor Crystal Archive Super Type PD is our newest evolution to Fujifilm's family of professional portrait color paper. Improving on our renowned Crystal Archive Paper technologies, print output results in more accurate color reproduction, more accurate whites, plus improved highlight detail. Consistently high-quality custom wedding and portrait prints are a result your customers will appreciate.

Improved lab handling characteristics make this RA-4 paper easy to use in the lab, and Crystal Archive image stability continues to assure your customer's wedding and portrait prints will withstand the test of time with unparalleled print permanence.

Improved Color Reproduction – Accurate color reproduction with increased saturation while providing excellent and natural skin tone gradation.

Accurate Whites Plus Improved Highlight Detail – Accurate whites, enabling enhanced highlight detail.

Excellent Image Stability – Excellent light storage stability and high image stability during long-term dark storage, as well as sharply improved stability with respect to nitrogen oxide, ozone and other gases.

Improved Lab Handling Characteristics – Improved latent image stability and tolerance for processing unevenness and pressure induced density variations that sometimes occur makes this paper easier to handle in the lab.
