

# Showroom using a projector to make proposals for new living spaces meeting customers' preferences

The image is for illustration purposes.

## Point 1 Projects images of walls and kitchen tiles for illustration purposes

Users' benefit

Makes proposals in real time by offering images of living spaces that meet each customer's taste

Supporting feature

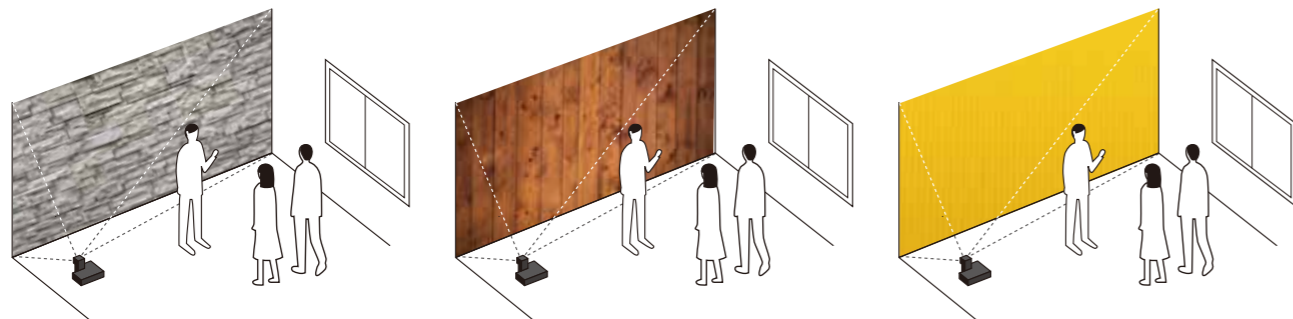

Ultra-short-throw

The ultra-short-throw lens enables the changing of the atmosphere of the surrounding space while allowing the securing of an exhibition space for your products.

In general, when using a projector, you cannot have a large projection unless it is placed on the opposite side of the room from the screen, but when using a conventional projector, you cannot project the entire wall unless you project from the opposite side of the room.

However, with FP-Z5000, a large projection can be achieved even when placed close to the screen wall.

It is a great support device for your sales activities to meet your customers' needs.

Making proposals that meet customers' tastes

## Point 2 Easy installation instantly changes a projector into a presentation device

Users' benefit

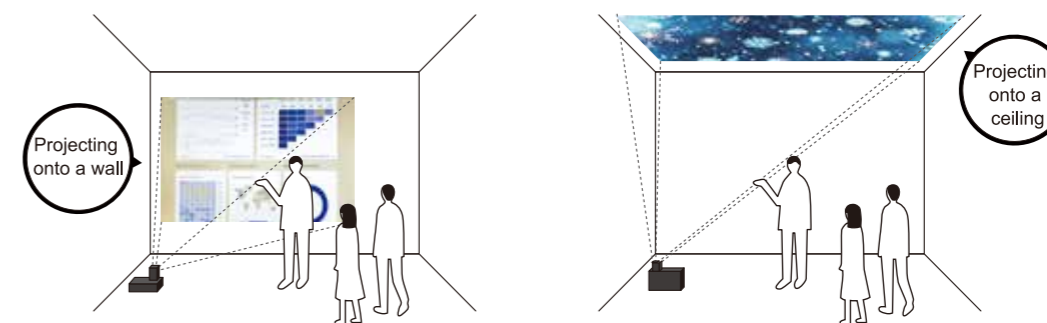

Installation is complete just by placing the projector on the floor and rotating the lens. No special requirements or operations necessary.

Supporting feature

Dual-axis rotating lens

FP-Z5000 allows for a quick shifting of projection from a wall to the ceiling by just rotating the lens.

For example, at a housing exhibition, the easy-to-handle FP-Z5000 allows local staff to operate the projector according to the product descriptions they provide.

Allows for installation that does not restrict the activities of the presenter and guests

## Point 3 Works as a campaign promotion device for professionals

Users' benefit

Can add visual effects without disturbing the exhibit and object layout according to the concept or season

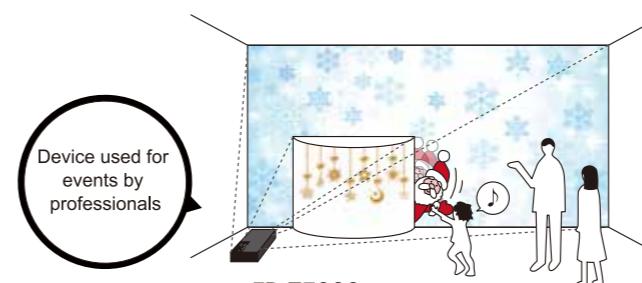

Supporting feature

Ultra-short-throw, Dual-axis rotating lens, Class-leading shift range

FP-Z5000 is a product for professionals, useful for things such as projection mapping.

Therefore, it is useful as an effective device not only when making proposals to customers at a showroom, but also in supporting corporate events for campaigns.

It is useful for creating an environment that incorporates a wide range of ideas without disturbing the atmosphere by, for example, projecting shooting stars of Santa Claus and reindeer onto the screen as a background to a Christmas tree.

FP-Z5000

Encourage customers' visits by creating a seasonal atmosphere
