

Provides new window display

U.F.O. by Francfranc LINKS UMEDA

Actual installation

Point 1 Provides large screen signage

Users' benefit

Provides a large 130-inch screen projection from a one meter projection distance.

Supporting feature

Ultra-short-throw

FP-Z5000 can project 130-inch video contents from only a one-meter projection distance. Once FP-Z5000 is installed, stores can create a seasonal atmosphere even in narrow, hard-to-decorate window display spaces by changing visual contents. Visual effects through projection allow decorations to be more flexibly changed.

Achieved projection from a very short distance, setting new standards

Point 2 Mannequins do not cast their shadow

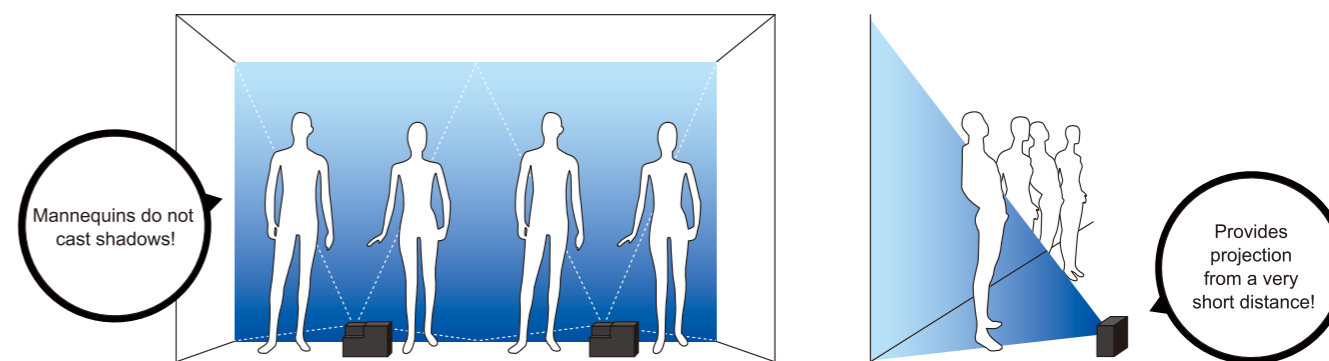

Users' benefit

Projection from various angles makes it possible to create atmosphere without creating shadows.

Supporting feature

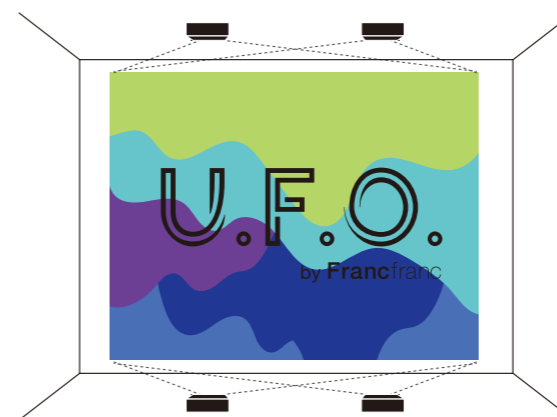

Class-leading shift range, Ultra-short-throw

FP-Z5000 provides class-leading lens shift range and easily prevents mannequins from casting shadows. Projection position can be widely and finely adjusted with lens shift without adjusting the projector's installed position. Stores can create their brand atmosphere without creating shadows when they display mannequins.

FP-Z5000 has been implemented by U.F.O. by Francfranc LINKS UMEDA on the third floor of LINKS Umeda. They use it to create interactive visual effects and provide window signage at night time.

The wide projection range and short projection distance must be checked!

Creates store signage with 4 projectors

When projecting onto a wall
