

Create a digital art space providing visitors with immersive experiences

Exhibition "OCEAN BY NAKED"

Point 1 Create a digital art space with a smaller number of projectors than before

Users' benefit

Provides a large screen projection even in an indoor space where sufficient projection distance cannot be ensured, which reduces the required number of projectors.

Supporting feature

Ultra-short-throw

The ultra-short-throw of FP-Z5000 ensures a wide projection space, which reduces the required number of projectors. This helps not only provide simple projection design but also reduce light interference between projectors and create more beautiful visual content.

- Large screen projection requires many projectors and installation spaces.
- Large screen multi-projection requires an equivalent number of projectors.
- The audience cannot get close to the screen to view without shadows being cast.

- High quality large screen projection
- The ultra-short-throw and wide lens shift provide large screen projection with fewer projectors.
- The audience can have immersive experiences because their shadows are not cast even when close to the screen.

Point 2 Easy installation achieved by the rotating lens

Users' benefit

Eliminates complex installation design and reduces actual manpower

Supporting feature

Dual-axis rotating lens

The dual-axis rotating lens function of FP-Z5000 allows for projection onto floors and walls by just rotating the lens of the projector installed in parallel with the ceiling. It does not require a complex installation by placing the projector at an angle or vertically hanging the unit, and helps reduce the time and effort, and the cost needed for installation work.

The smooth image is so magnificent it looks as if it could pass through the ocean.

The projector installed in parallel with the ceiling is inconspicuous

Point 3 Makes the atmosphere creation more flexible

Users' benefit

Allows the installation of the projector out of sight and creates an immersive atmosphere

Supporting feature

Ultra-short-throw, Class-leading shift range

The class-leading lens shift range of FP-Z5000 has improved the flexibility of the projector's installation position and allowed for installation out of customers' sight.

Also, the ultra-short-throw lens allows for effortless installation in a space with many obstacles.

Projector's out-of-sight installation is possible!!
