

## Please Read This Important Instructional Notice!

*Your DX100 may perform a firmware upgrade during the driver installation process. The indications of this process will be all of the LED's will illuminate on the front of the printer with no audible noise,*

*and a message displayed on your screen.*

*During this process the LED's will turn off one by one. It is important not to interrupt this process, such as opening any doors, restarting your pc or damage will occur and deem the printer inoperable. The indication this process is complete will be an initialization of the printer with the blue light returning to solid.*
